Why choose datacube?

All health and safety files.
All operating and maintenance documentation.
All residual risk materials.
All contact details of project team, contractors, suppliers and manufacturers.

All in a clear, accessible format, reliably reproduced and checked for accuracy, regardless of the state of the original documentation.

Where possible, original documentation is provided in PDF format, direct from manufacturers or suppliers.

Bluebeen

- chases subcontractors and manufacturers to gather every last document
- compiles the information in a standard, easy-to-use format
- provides you with a quality hard copy archive or a set of CDs (or both)

Who's it for?

Commercial and residential property developers will benefit from datacube.

Accessing datacube

datacube documentation is beautifully presented so that it stores easily in your archive. Its standard templates make it easy to find the right document, using clear icons and a comprehensive index.

Data Cube also comes as an electronic archive - it's faster to use and ensures paperwork never goes astray. It also allows maintenance staff to access vital information through their laptops.

And because content is stored digitally, floor plans can be manipulated at any stage when you want to change the use of space.
